

Kaba's King Of The Castle

In February 2006 the International Study Centre contacted various companies including Kaba Ltd, with the aim to increase the security at the Study Centre and it's remote surrounding areas. There was a particular need to be able to "compartmentalise" different parts of the residences, with specific access codes for different residents. The requirements also included ease of use, simple mechanics, speedy and cheap replacement of key cards and a competitive price.

Following several meetings and a thorough site survey it was confirmed that these objectives could be achieved. The ISC team were introduced to the Kaba "Generation E760" lock with Key over ride, and during a thorough demonstration it was highlighted that all of the issues that had been raised regarding safety, restricting and zoning areas, audit security trail, time efficiency and annual cost expenditure would be resolved by implementing this solution.

The International Study Centre (ISC) *pictured left*, is part of Queen's University (Canada). Internationalisation is the cornerstone of the ISC experience. Students learn about the unique culture of Britain and earn academic course credits from one of Canada's top universities.

Kaba's E-760 Hotel Lock is designed to meet all the challenging and diverse needs of the Lodging industry and brings together three essential qualities for any end user.

- Simple to install
- Ease of use
- Value for money

Subsequently, Kaba was chosen to supply and install over 180 E760s to cover the complete locking system to the main reception, the main education centre, castle and accommodation blocks as well as the forthcoming extension. This has ensured the safety and security of it's residents and their belongings.

Kaba manufactures world leading security products including cylinders, safelocks, hotel locks, push button locks, access control systems and time and attendance solutions.
